PROFILE

Computer Science and Engineering undergraduate and independent developer with hands-on experience in mobile apps, web systems, embedded hardware, local AI models, and autonomous drones. Shipped an Android app to 20,000+ organic downloads on the Google Play Store, and continues to build across AI, robotics, and full-stack projects.

EDUCATION

MIT Art, Design and Technology University

Pune, Maharashtra

Bachelor of Technology in Computer Science and Engineering | CGPA: 8.3 (1st year)

Aug. 2025 – May 2029

- Class Representative, both semesters of First Year — coordinated schedules, academic queries, and student feedback between faculty and classmates.

EXPERIENCE

Independent Developer

Aug. 2021 – Present

Self-Employed

Pune, India

- Published Android applications on the Google Play Store, reaching 20,000+ downloads with no paid promotion or marketing spend. Continued building and shipping across Android, iOS, and Web platforms.

PROJECTS

Edge-AI Autonomous Warehouse Robot Fleet | *SIH Internal — Top 100 of 500+ Teams*

Sep. 2026

- Designed decentralized coordination and collision avoidance for 3+ warehouse robots running on Raspberry Pi/Jetson Nano without a central cloud planner.
- Built robot-to-robot location sharing, route planning, dynamic rerouting, and fleet monitoring; recorded zero collisions and 20%+ faster task completion across simulated fleet runs.

SentinelRAG — Secure Knowledge Assistant | *Python, AI Security*

2026

- Protected AI knowledge systems from malicious instructions hidden in retrieved documents, emails, and web content.
- Compared a vulnerable baseline, fine-tuned classifier, and small language model across detection accuracy, response time, and usability.

AEGIS — Autonomous Drone Emergency Response | *Computer Vision, Drone Simulation*

Sep. 2026

- Built a simulated multi-drone platform to detect incidents and coordinate emergency response across a city.
- Integrated drone control, live telemetry, AI-based object detection, flight simulation, geofencing, and a real-time map dashboard.

Engram — Persistent Memory Plugin for Obsidian | *TypeScript, Vector Embeddings, LLM Integration*

2026

- Built an open-source Obsidian plugin giving an AI chat assistant persistent, auto-summarizing memory and semantic vector search over a user's notes, with support for 10+ local and cloud LLMs (OpenAI, Anthropic, etc).
- Designed vault-scoping permissions, prompt-injection-safe context handling, and an undo history panel for safe file modification.

SmartFlow — Adaptive Traffic Signal Control | *ESP8266, Node.js, Local LLMs*

2025

- Built a closed-loop traffic controller on ESP8266 hardware with 3-lane ultrasonic vehicle sensing and OLED output, computing adaptive green-light cycles via a local LLM endpoint with a deterministic optimization fallback for uninterrupted operation.

TECHNICAL SKILLS

Languages: Python, Dart, TypeScript/JavaScript, C/C++, Kotlin, Bash

AI & Robotics: Retrieval-Augmented Generation (RAG), AI Guardrails, Computer Vision, YOLOv8, MAVSDK, PX4, Gazebo

App & Web: Flutter, Firebase, Node.js

Hardware & Platforms: Arduino, Raspberry Pi, Jetson Nano, Linux, Ollama, llama.cpp

Developer Tools: Git/GitHub, Android Studio, VS Code
